

# Playwright with JavaScript / TypeScript

## Objective 1:

Automate the process of fetching the titles, first comment of posts between the 40th and 45th post on Reddit for a specific topic (subreddit) using UI automation.

---

## Assignment Overview:

- **Task:** Write an automation that will:
    1. Open the Reddit website.
    2. Navigate to a specific subreddit of your choice (e.g., r/learnprogramming).
    3. Fetch the titles of posts numbered 40th to 45th (inclusive) on the page.
    4. Click on comments and fetch the first comment on that post
    5. Verify that exactly 6 titles and comments are fetched.
    6. Print the titles to the console and optionally validate their content.
- 

## Objective 2:

Write an automation script that will open Gmail in a browser, search for an email invite sent from **aumni techworks**, and reply to that email with an acceptance message for the next round of the process.

---

## Assignment Overview:

- **Task:** Automate the following process using Selenium or equivalent:
    1. Open Gmail in a browser.
    2. Log in with provided Gmail credentials (for the test user account).
    3. Search for an email from **aumni techworks** (you can assume the subject or sender).
    4. Open the email and click on the **Reply** button.
    5. Write a response with the acceptance message (e.g., "I accept the invitation to proceed to the next round").
    6. Send the reply.
-

## Submission Instructions:

1. **GitHub Repository:** Please upload your solution to a GitHub repository and share the link.
2. **Include a README:** Explain how to set up and run the automation script. Provide any instructions needed to run the script successfully.
